Does your business spend more on cloud storage than you realize?

Does your business use cloud storage?

That's storing files and data online instead of on your own computers.

There's a good chance you're spending more than you need to be. And the biggest problem isn't how much space you're using... it's the hidden fees.

One of the main culprits is something called egress fees. These are charges you pay when you want to move your data away from your current cloud provider or access it in certain ways. In simple terms, you're being charged just to use your own data. It's like paying a fee every time you open your own storage cupboard.

These costs add up quickly. And they're making it harder for businesses to stay within budget.

Recent research found that almost half of what a company pays for cloud storage goes toward these fees... NOT the actual storage itself.

And the result?

Most businesses end up overspending on their cloud storage plans. Only a small percentage manage to stay under budget.

This pricing model makes it tricky to switch providers even if better or more affordable options are available. That's why so many businesses stick with their current provider. Not because it's the best choice, but because it's too expensive to move.

To keep costs under control, many businesses are now choosing a hybrid approach to storage. That means using a mix of cloud services and local, on-site storage (like servers or hard drives you own). It gives you more flexibility. And it can help you avoid some of those expensive cloud fees.

The key takeaway?

Cloud storage isn't always as straightforward – or as affordable – as it seems. If you haven't taken a close look at your cloud costs lately, it's worth reviewing them.

Understanding where your money is going can help you make smarter decisions and avoid paying for things you don't need.

Not sure where to start? We can help you make sense of it all and keep your storage spending in check. Get in touch.

Exciting things for RCT this month...

We're soaking up every bit of sunshine this summer at Rivercity Tech! With the kids officially out of school, the office vibe is extra light and lively. We recently gathered the whole team for a fun summer photo shoot to capture updated headshots and a brand-new group photo—keep your eyes peeled for those fresh faces in our upcoming posts and team page updates!

TechFacts

1 The famous 6-second Windows 95 startup sound made history. It's now part of the US Library of Congress. It was chosen for its cultural significance and joins the National Recording Registry alongside other iconic recordings.

2 Microsoft has an AI "red team" that acts like the bad guys on purpose. They try to break their own systems to find weaknesses before real hackers do. It's all about staying one step ahead.

3 Back in 1976, Apple co-founder Ronald Wayne sold his 10% share in the company for just \$800. If he'd held on to it, that slice of Apple would be worth over \$200 billion today. Now that's a serious case of seller's regret.

Technology update

Watch out for a new kind of phishing scam

Cybercriminals have found a way to send fake emails that look almost exactly like the real thing. Right down to the login pages you're asked to click.

A group nicknamed "Morphing Meerkat" is behind it. They've managed to copy the look of more than 100 well-known brands.

Because the emails and web pages match so closely, they're very hard to spot as fake. **You should boost your security settings to make it harder for these scams to get through.**

About **Rivercity Tech**

The Rivercity Tech (RCT) team is a mixture of cybersecurity and technology experts. We take what we do very seriously, but bring an approachable and easygoing flair to our interactions. We always say we are forging a partnership, immediately becoming an extension of our client's team. We would love to show you what we are all about!

INSPIRATIONAL QUOTE OF THE MONTH

"Work takes on new meaning when you feel you are pointed in the right direction. Otherwise, it's just a job, and life is too short for that."

Tim Cook, CEO at Apple

We heard July-k our fun tech quiz...

1. What year was the first ever text message sent?
2. Which computer programming language did Sun Microsystems create in the 1990s?
3. Which year was Google founded?
4. What's the name of the digital file format created in 1987 to reduce the size of images and short animations?
5. What type of electromagnetic waves does Wi-Fi use?

The answers are below.

5. Radio waves
4. GIF
3. Java
2. GIF
1. 1992

**NEW TO**

MICROSOFT

New spell check feature for Teams

Tired of making embarrassing typos in Teams messages?

Microsoft's rolling out an improved spell check for Teams that highlights mistakes as you type and suggests quick fixes. Just like in Word.

You can choose a correction, ignore it, or add your own words to the dictionary. It also supports switching between up to three languages (though we don't yet know which ones).

**It's available now on
Windows and Mac.**

SYSTEM HACKED

The real cost of a security breach (it's not just about money)

We hear about security breaches all the time. But it's easy to think, "That won't happen to us."

Unfortunately, the truth is... it could.

And if it does, the costs to your business go far beyond fixing a few systems or paying a fine.

Cyberattacks have become more frequent, more sophisticated, and more damaging.

As more businesses move their data online, rely on cloud services, and encourage remote work, their networks become easier to target.

And attackers know it.

When a business suffers a breach (where someone gains unauthorized access to your data) the immediate impact might include lost revenue, a damaged reputation, or a big regulatory penalty.

But the real damage often appears over time.

Take this in: The average cost of a serious security breach is now estimated at nearly \$600 million. That includes everything from fixing systems, legal fees, lost business, and customer support. It's a huge jump from just a year ago, and it shows no signs of slowing down.

But it doesn't stop at finances.

Businesses that are breached often see a drop in customer trust. People may take their business elsewhere, unsure if their data is safe. In some cases, the business's value drops as investors lose confidence. Even applying for funding or planning future growth becomes harder.

It gets worse in sectors like healthcare or finance, where a breach can delay operations, expose personal records, and cause real harm to people. That kind of disruption can ripple far beyond just the business itself.

The bad news is: Cyberthreats aren't going away.

The good news?

There's a lot you can do to reduce the risk. A strong security setup, smart employee training, and a plan for how to respond to an attack can make all the difference.

**If you're not sure how protected your business is, don't wait for something to go wrong.
Let us help, starting with a security audit. Get in touch.**

Business gadget of the month

Anker PowerConf C200 2K webcam

You know what's distracting when you're on a video call?

A poor quality display and background noise.

Lucky for us, Anker has the perfect solution. The PowerConf C200 is a 2k webcam that not only gives you ultra-clear resolution but comes with AI-powered noise cancelling microphones for crisp, clear conversations.

\$51.99 from Amazon.

This is how you can get in touch with us:

RIVERCITY
TECHNOLOGY SERVICES LTD

Q: What's the difference between backing up my data and syncing it?

A: Syncing keeps files up to date across devices. Backup means creating a separate copy in case something goes wrong. You need both to stay safe.

Q: We use Microsoft 365. Does that mean we're automatically protected from cyber threats?

A: Not quite. Microsoft 365 has some great built-in tools, but you still need extra security layers like backup, security software, and staff training.

Q: How do I know if our Wi-Fi is secure enough?

Make sure you're using a strong password, up-to-date hardware, and modern encryption like WPA3. And ALWAYS change the default router settings.
